(54) Title: A BEVERAGE MAKER INCORPORATING MULTIPLE BEVERAGE COLLECTION CHAMBERS

(57) Abstract: A beverage maker has a removable beverage preparation assembly (4) that includes beverage collection unit, which in this example is a foam unit (30). The foam unit (30) is positioned below a nozzle for discharging prepared beverage and comprises a receptacle divided into several foam compartments (31). The foam unit (30) can be rotated about an axis A so that each of the foam compartments can be positioned under the nozzle (25). In use, beverage is dispensed by the nozzle (25) as a jet of liquid that impacts a surface of one of the foam compartments to produce foam. The beverage is then dispensed from the foam compartment the through an opening (32) and along an outlet (33) into a cup for drinking. Subsequent beverages can be prepared using different foam compartments (31).
